Script issues

- Multiple URLs appear a lot in the data, but I don't think are supported by our schema
- Multiple pieces of location information on the same line (different lines in the original PDF)
 - When the name and another piece of information (usually address) appear on the same line, the name is ignored
 - ~~When URL and address are together, they each appear in the other's field~~
 - Multiple phone numbers on the same line don't work
 - ~~It's possible if some of the description is on the same line as a URL, that part of the description will just be ignored [Doesn't seem to happen]~~
 - Phones should be parsed including the prefix and extensions etc, but that's a problem when the address, URL, etc are on the same line

Output

- Regex find-replace fixes:
 - Remove “({3,}[\d]+)([\d]+ {3,})” – page numbers
 - Replace “([a-z])\- ([a-z])” with \$1\$2 – multiline descriptions with split words

Post-parse additions

- Use geocoding API to add long/lats
- Maybe use same organization even when it appears under different categories
